### **InnoMedia Phone Adapters selected by D&E Communications for its Jazzd<sup>®</sup> Phone Service for Broadband**

**MILPITAS, CA (May 27, 2005)** – InnoMedia today announced that D&E Communications, an integrated communications service provider serving central Pennsylvania, will use InnoMedia CPE for its commercial VoIP service.

InnoMedia MTA Phone Adapters are the most flexible, interoperable, feature-rich, and cost-effective IP telephony CPE devices available on the market today. Compatible with any standard analog telephone set, InnoMedia's MTA products can deliver multiple telephone lines each with their own unique telephone number, is simple to install, and provides superior voice service by utilizing advanced compression, echo cancellation, and packet recovery algorithms.

InnoMedia terminal adapters are widely deployed in the United States, Japan and other parts of the world by leading service providers. With InnoMedia, companies can begin offering VoIP service almost immediately. InnoMedia MTAs will support a multitude of system configurations including broadband loop emulations with GR303/V5.2 gateways, PacketCable<sup>™</sup>-based Call Agents, or SIP-based Softswitches.

“We are delighted to be chosen by D&E Communications for their new Jazzd Phone Service,” said Shailesh Patel, Senior Director of Product Management. “Our success with the world’s leading service providers is built on our reputation for delivering products on schedule and our total commitment to service and quality.”

D&E Communications Jazzd Phone Service for Broadband provides central Pennsylvania residents with a competitive alternative for phone service. Using Voice over Internet Protocol (VoIP) technology, the new service includes unlimited local and domestic long distance calling, enhanced 911 service, the ability to receive and forward voice mail messages through e-mail, a web site to control custom calling features, and D&E's own telemarketer call blocking service — all for \$29.99 per month.

By plugging a D&E Jazzd Phone Adapter into a DSL or cable modem, customers can use their regular telephone to make and receive calls over their broadband Internet connection.

"D&E Communications' selection of InnoMedia for its residential VoIP service was based on several key requirements," said Chuck Schneider, Manager, Network Engineering at D&E. "We needed a product that could be deployed today, leveraging the existing legacy Class 5 TDM switch, and that could, with minimal configuration changes, migrate to a next generation switching architecture. InnoMedia's terminal adapter supports advanced compression while still maintaining a high quality voice service. It also supports multiple POTS lines and provides ease of provisioning and the ability to be deployed in various broadband service provider networks."

#### **About InnoMedia**

Founded in 1995, InnoMedia is a privately held multinational organization with operations in the United States, Singapore, Taiwan and China. The company delivers Internet and broadband access IP telephony solutions to broadband service providers, as well as OEM and distribution partners. InnoMedia has the most advanced, award-winning portfolio of IP telephony solutions available in the market today, delivering high-quality voice and video over any IP network.
